

Automated School IT Helpdesk Ticket Classification in ServiceNow

PHASE 7: PROJECT DOCUMENTATION PHASE

Technical documentation records all configuration steps, architectural decisions, and future expansion opportunities for institutional handoff.

- **Step-by-Step Visual Guide:** Every configuration stage—from Update Set initialization and dictionary dependency setup to Flow Designer conditional logic and email log previews—is documented with complete navigation trails and configuration records.
- **Scalability Notes:** Architectural notes outline how the foundation serves small-to-medium educational institutions immediately and can later incorporate Service Level Agreement (SLA) tracking, automated support group assignment rules, or ServiceNow Predictive Intelligence.

Institutional Handoff & Future Enhancement Roadmap

Enhancement Area	Current Baseline Implementation	Future Phase Expansion Capability
Support Group Routing	Assigned Group & Assigned to reference fields available on form.	Automatically route Network tickets to Network Support Group and Hardware tickets to Campus AV Team.
Service Level Agreements (SLA)	State field tracks New, In progress, On hold, Resolved, Closed.	Attach 4-hour response SLAs and 24-hour resolution SLAs based on Category.
Classification Intelligence	Keyword matching via Flow Designer If / Else If branches.	Integrate ServiceNow Predictive Intelligence / Now Assist for natural language classification.
Self-Service Intake	Direct form entry on Incident Workflow (u_incident_workflow).	Publish a School IT Record Producer on the ServiceNow Employee Center / Student Portal.
